

Drilling Engineers

Resolute Natural Resources Company has immediate openings for Drilling Engineers located in the Denver office. Reporting to the Denver Drilling Manager, the Drilling Engineer plans and executes drilling activities on the company's operated assets. Primary coverage areas are Wyoming and North Dakota, but may vary. Responsibilities include:

- Planning and designing new drilling projects utilizing sound engineering practices and standards to ensure safety to personnel and protection of equipment, property and environment.
- Assisting with planning and preparation of the Company's annual Expense and Capital budgets.
- Monitoring, coordinating and directing drilling and well service activities from the office and at field locations as necessary.
- Preparing detailed drilling, completion and workover AFEs and managing costs to the AFE and Company budgets throughout the drilling operations.
- Maintaining complete cost and planning schedule records for projects and reporting as needed by Management.
- Assuring compliance with government and regulatory agency requirements.

BS in Petroleum and minimum 7 years experience required. Must have knowledge of surface and downhole drilling equipment, tools, methods, procedures and safety practices as well as drilling design and well planning concepts. Project management and cost estimating and budgeting experience also required. Submit your cover letter and resume to:
